INFORMATION + NETWORKING

## Digitalisation + Construction Industry Information + Networking Start-up + Know-how

We, the team at CENTRIO, are a young progressive company with several years of experience in the area of software development. We offer:

- + NETWORKING OF INFORMATION
- + REDUCTION OF COMPLEXITIES
- + SUSTAINABLE SOLUTIONS
- + USER-FRIENDLY IT-PRODUCTS

As a company of the PERI group, we gained our know-how and experience from the construction supplier industry. This comprehensive knowledge qualifies our team to integrate complex processes and project structures into well-structured, networked IT solutions and it gives us the ability to apply them successfully. The combination of well-founded knowledge and independent agile start-up makes CENTRIO a partner who understands the needs of its customers and supplies innovative and sustainable solutions precisely tailored to their requirements.

Our target is digitalization of the construction project, to ensure and maintain an overview of all processes at all times.

With user-friendly and adaptable IT products, we provide our customers the ability to transparently present complex information and link them in a well-structured manner. This facilitates you to smoothly manage processes and increase efficiencies whilst also successfully reducing costs. We put value on a reliable long-term partnership and offer security on your way to success.

We will support you until the common goals have been reached and we will remain your reliable partner - hands on and focused.

*„Throughout the development of the CENTRIO system at PERI we have managed to network information efficiently and simplify the cooperation between teams. With the founding of CENTRIO as a subsidiary of PERI we want to support construction companies in mastering similar challenges and to actively promote the digitalisation of construction projects.“*

*Franz Kramer, Managing Director, CENTRIO GmbH & Co. KG  
former head of the Group IT, PERI GmbH*

Thousands of pieces of information.  
Hundreds of processes.  
One platform.

Building projects are complex and with every step that the construction takes, the challenges increase and questions accumulate: Does my team have all information and documents at hand? Is the team working with actual plans? Where are the pictures from the last construction site visit? Where is the supplier overview? Where are the invoices? CENTRIO CLM (Construction Lifecycle Management) has the answer to all of these questions:

- + COLLECT INFORMATION
- + COLLATE MASTER DATA
- + MANAGE DOCUMENTS
- + LINK DATA
- + FACILITATE COMMUNICATION

Use CENTRIO CLM to create a digital suite that allows you to link all data and documents throughout the lifecycle of a construction project. From now on, you can enjoy efficient and safe administration with simple search and easy retrieval of all information and data. In short: You and your team will always have a common overview, gain access to the same knowledge base and will therefore save time and effort.

CENTRIO CLM is a mature, practice-oriented solution that will support all users involved. Thanks to stable interfaces with tried and tested programs and systems, all processes can be linked to each other. CENTRIO CLM supports CAD systems, is BIM-compatible and permits, among others, data exchange with standard software such as SAP and MS Office. Therefore all relevant processes in the office and at the construction site can be standardised and optimised.

CENTRIO CLM permits efficient construction project management even at low bandwidths. The benefits for our customers: All processes and information, as well as data and documents, are combined within a consistent platform, efficiently managed and archived. This optimises the information flow and gives you the complete overview of every construction project – from acquisition to hand-over.

With CENTRIO CLM, we will provide you with a future-oriented tool that is well structured, sustainable, reliable, and will support your construction projects with up to date information.

20 YEARS OF EXPERIENCE \*

3.000 USERS \*

100.000 SUCCESSFULLY PROCESSED PROJECTS \*

## Information

## Synergies

## Cost saving

### + INFORMATION

As a central document management system, CENTRIO CLM links all information and data of your construction project in a digital suite and offers efficient and safe handling. The users always have the latest documents and versions at hand.

### + SYNERGIES

All processes can be summarised, administered and processed within a consistent platform. Filing of project-related emails, quick access to contacts and automatically completed templates facilitate the workflow.

### + COST SAVING

CENTRIO CLM optimises exchange of information. Documents and information can be found at any time and are always available. The quick comparison of services and costs creates decisive competitive benefits and added value in your construction projects.

## Networking

## Efficiency

## Time saving

### + NETWORKING

CENTRIO CLM can connect office programs, business management software and CAD systems. The intuitive authorisation system permits individual assignment of competences and safe access to all relevant processes and data of your construction project.

### + EFFICIENCY

CENTRIO CLM increases efficiency and quality of construction projects by improving the data flow with fast and flexible search functionality. Within seconds, users can find the required information, data and processes for their construction projects.

### + TIME SAVING

Use of CENTRIO CLM will reduce time spent in planning, administration and implementation of construction projects. Provision of a central system incl. version control, status management and archiving ensures sustainable time reduction.
